

The approximate expenses for each car are seen in Table C below.

Table C: Maintenance Cost

	Car Type	EV 60kWh	1998cc petrol car
a.	Road Tax	Refer to Table D below	
b.	Repayment of loan	to be calculated	
c.	Other costs (Annual)	\$4700	\$3000
d.	Other costs (Monthly)	\$600	\$800
Total expenses = a + b + c + d			

Table D: Road Tax (for 6 months)

<i>The table calculates the road tax for 6 months</i>		
For Petrol Car Engine Capacity (EC) in cc	$1000 < EC \leq 1600$	$[\$250 + \$0.375(EC - 1000)] \times 0.782$
	$1600 < EC \leq 3000$	$[\$475 + \$0.75(EC - 1600)] \times 0.782$
For Electric Car Power Rating (PR) in kWh	$30 < PR \leq 230$	$[\$250 + \$3.75(PR - 30)] \times 0.782$
	$PR > 230$	$[\$1,525 + \$10(PR - 230)] \times 0.782$

- (c) Lee's monthly expenditure is around \$2700 on average.
Based on the information given, determine if Lee can afford the car identified in **part (b)**.
Show your calculations clearly and justify any decisions you make.
